Not illustrated. 1922 Excerpt: .are experimentally ascertainable with the exception of  $N$ , the equation furnishes a means of determining Avogadro's constant Actual experiments on ethylene made by Onnes and Keeson have shown that the method is a practical one; and the result of their work led to the value  $N = 75 \times 10^{22}$ , the experimental error being about 15 per cent. 1 Smoluchowski, Acad. Sci. Cracow, December, 1907. Rayleigh, Phil. Mag., 1881, 41, 86; Lorenz, (Euvres, I., 496. As was pointed out by Rayleigh, somewhat similar considerations apply to the blue light which comes to us from the sky on a clear day. Here it is assumed that the nitrogen and oxygen molecules act as diffracting centres. Measurements made by Brillouin<sup>1</sup> lead to the value  $N = 60 \times 10^{23}$ , but these results are probably not without sources of error. 4. The Determination of  $N$  from Properties of Emulsions. In the last chapter, some account was given of Perrin's researches upon the distribution of particles in emulsions; and it was pointed out that he used the equation--in which  $n$  and  $n'$  are the numbers of particles observed in  $D$  and  $d$  are respectively the densities of the particle and of the liquid in which it floats;  $R$  and  $T$  are the gas equation constants;  $g$  is the gravity constant; and  $N$  is Avogadro's constant. It is evident that when Perrin had determined the relative numbers of particles in two layers at different altitudes in the...
