Not illustrated. 1879 Excerpt: . . . of the root last, obtained, and subtract the product from the dividend. If there are more periods to be brought down, continue the operation in the same manner as before. Note 1. If a root figure is 0, place 0 at the right-of the divisor, and bring down the next period to complete the dividend. Note 2. If there be a final remainder, the given number has not an exact root; but we may continue the operation, by annexing an even number of decimal ciphers, and thus obtain a decimal part to be added to the integral part already found. Note 3. In pointing a number having a decimal part, we begin at the units place, and point both to the right and left of it; and, if the decimal has no exact root, we may continue to form decimal periods to any desirable extent. Note 4. The root of a decimal without an integral part may be found as though the decimal were an entire number, care being taken to make the number of decimal places even, by annexing a cipher, if necessary. Examples. 2. Required the square root of 365, to four decimal places. OPERATION. It will be observed that four periods of decimal ciphers were annexed to the given number, to correspond with the number of decimal figures required in the root. On obtaining the fourth decimal figure of the root, there is still a remainder, and to show that the root obtained...
